

Creating Export CDs from i-CATVision

Step 1

Put a Writeable CD in the drive you wish to use. (This must be a CD-RW or DVD-RW drive, not a CD-ROM drive). Close any dialog boxes that open automatically.

Launch i-CATVision if it is not already running.

From the top Main Menu, select **Tools > Create Export CD**.

Step 2

If you have more than one CD drive, select the drive with the CD in it. (Usually this will be a CD-RW or DVD-RW drive).

(Optional) - If you are using a Re-Writeable CD and you wish to erase the data that is already on the CD, click on "Erase CD-RW".

Step 3

Select the patient that you would like to burn to the CD. Be sure to tick the tick box in the Study list next to the **"CT"** Study you would like to burn to the CD. **Do not select "RAW_CT" Studies.**

Make sure **Multi-File DICOM** and **Compressed** are selected. We recommend ticking the **Use Lossy Compression** box as well.

Step 4

Click **Create CD** in the CD burner window. A message is displayed when the burn is complete, and the CD ejects automatically.
